

LESCHACO THAILAND

Storage solution for products from
Asia and Europe

Statement from the customer

“The high-quality Racking System installed by SSI Schaefer ensures that products and chemicals are safely stored. The team from SSI Schaefer was professional and completed the installation on time.”

Mr. Sebastian Haebler from Leschaco Thailand

Project objectives

- ▶ Maximise storage capacity
- ▶ Provide a working environment with high levels of safety
- ▶ Continuous improvement and development of the Warehouse Management System
- ▶ To serve the growing market

Scope of supply and services

- ▶ 1600 Selective Pallet Racking, with total of 9,500 pallet locations

Leschaco Thailand

Being one of the larger international logistics providers in the country, Leschaco Thailand provides logistics solutions particularly in the fields of the chemical, pharmaceutical, and automotive industries. Leschaco Thailand manages the country's only hazardous goods warehouse that meets the standards of the German Verband der Chemischen Industrie (VCI) (Association of the Chemical Industry).

Project

Leschaco operates as a public warehouse in TPARK, a top international standard logistics community in Samutprakarn. The company wanted to expand the warehouse to serve a wider market. With the objectives of maximising storage capacity, SSI Schaefer designed and installed the Selective Pallet Racking System with system height of 11,856mm, width of 1,000mm and clear entry of 3,600mm.

Serving clients from both Europe and Asia, Leschaco's storage facility handles pallets of different sizes. The sizes of the pallet locations were carefully designed to provide flexibility for storage of both European (800mm X 1200mm) and Asian (1000mm X 1200mm) pallets. The clear entry of 3,600mm would allow each bay to store up to 4 European pallets or 3 Asian pallets.

The Racking System has a total storage capacity of 9,500 pallet locations and could also store drums and roll pallets. In addition, the underpass was designed to provide safe and easy access to each and every bay.

In a nutshell

Serving a wide array of industries, Leschaco is one of the larger international logistics providers in Thailand. In this expansion project, Leschaco required a storage solution to maximise storage capacity in their public warehouse. In order to meet the customer's requirements, SSI Schaefer installed the Selective Pallet Racking System which created a total of 9,500 pallet locations. The storage solution improves Leschaco's efficiency and provides flexibility for storage of both European and Asian pallets.
